## Quality by Design

A clinical Microsystems approach

E.C. Nelson, P.B. Batalden, & M.M. Godfrey  
2007

# Theme

- o Falls 4<sup>th</sup> chief complaint in 2014
- o No process for when to complete fall assessment tool
- o At least 8 reported falls in 2014

# Improvement Ramp

## Quality by Design

A clinical Microsystems approach

E.C. Nelson, P.B. Batalden, & M.M. Godfrey  
2007

# Global Aim

- o I aim to improve patient safety in the emergency department (ED). The process begins with identifying why patients are falling, and finding the best assessment tool that captures patients at risk of falling. The process ends with 100% participation in the utilization of ED specific fall screen. By working on the process, I expect a decrease in patient falls, an increase in patients' sense of safety, and decrease in fall readmissions. It is important to work on this now because I have identified the need to improve prevention and preparation to care for patients at risk for falls.

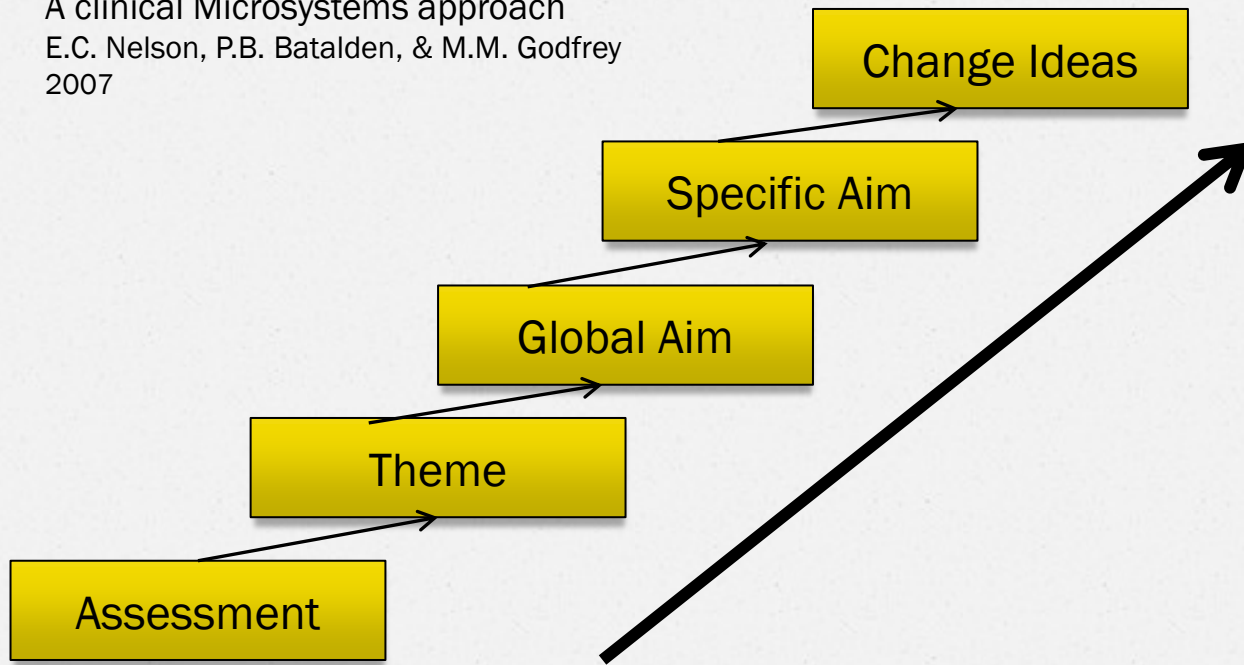

# Improvement Ramp

## Quality by Design

A clinical Microsystems approach

E.C. Nelson, P.B. Batalden, & M.M. Godfrey  
2007

# Specific Aim

- o I aim to reduce the amount of falls in the ED by 75%. An ED specific screen will be assessed on 100% of patients. Appropriate preventative measures will be initiated on all patients at risk for falls.

# Change Ideas

# Literature Review

## Statistics

- o 1 in 3 adults greater than 65 fall each yr.
  - o In 2009, > 1.59 million went an ED
- o 30% with hip fractures die within year
- o In 2006, fall-related events for 65 y or older cost 19 billion dollars

## Iowa

- o Death rate has risen 20% over the past 5 y
- o Hospitalization rate 3.54/1,000 (IA)
  - o >65 y = 17.38/1,000
- o 1.49 billion dollars spent in Iowa between 2009 and 2013
- o Average cost per hospitalization is \$27,569

# Literature Review

## Themes

- o ED specific tool
- o Implement interventions
- o Prevention Program
